All thermal performance (R-Values) are classified by Underwriters Laboratories in accordance with ADC Flexible Duct Performance and Installation Standard (1991) using ASTM C-518 (1991), at installed wall thickness, on flat insulation only.

Description

- UPC #017 is a UL 181, Class 0 Air Duct which meets the requirements of NFPA (90A & 90B).
- UPC #018 is an insulated UL 181, Class 1 Air Duct which meets the requirements of NFPA (90A & 90B).
- UPC #020 is a low cost, general purpose, venting duct designed for use where a UL 181 listing is not required.
- All three are made from non-combustible, corrugated aluminum with watertight lock seams.

Construction

Both #017 and #018 are constructed of heavy gauge corrugated aluminum, while the #020 is constructed of a slightly lighter gauge. All three have watertight continuous lock seams. #018 is wrapped in a thick blanket of fiberglass insulation and a durable metalized polyester vapor barrier. All three are compressed for easy storage and handling.

FEATURES & BENEFITS

Rugged All Metal Inner Core Construction - Non-combustible / puncture resistant
Semi-Rigid Yet Flexible - Easily shaped into bends, maintains shape / Will not sag between supports
Lightweight Compact Cartons - Reduces warehouse / jobsite handling costs and is easily stored
UPC #018 - Thick Blanket of Fiberglass Insulation - Energy efficient / Excellent thermal characteristics
UPC #017 & #018 - Universal Male/Female Fittings - Lengths easily connected to terminal devices or other ducts
UPC #020 - One End Crimped/One End Plain - Lengths easily connected to terminal devices or other ducts

APPLICATIONS & CODE COMPLIANCES*

ATCO #017 and #018 are used as supply, return, and exhaust ducts in low, medium, and high pressure heating, air conditioning, and exhaust systems. Both can be used in an air distribution system, connecting ducts, mixing boxes, diffusers, light troffers, room inlets, or other terminal devices. UL 181, UMC 10-1 (ICC ESREPORT NO. ESR-1268). STRAIGHT RUN

* FD 72-R1 Test Code of the Air Diffusion Council. Friction loss is computed in inches of water gauge per 100 ft. of duct. By using CFM or FPM values for a given duct dimension, the friction loss can be determined. Conversion of CFM to FPM also can be made.
