# **BR Circuit Breakers**

## **Product Description**

#### Plug-On Branch Feeder Type Arc Fault Circuit Breakers, Type BR—10 kAIC, 120 Vac and 120/240 Vac

A branch feeder type arc fault circuit interrupter is a device intended to mitigate high current arcing faults in the complete circuit, including connected cords. High current arcing faults can occur from line to neutral or line to ground. These arcing faults are in parallel with the load and produce the most energy of all arcing faults.

The branch feeder type AFCI is required in the 1999 and 2002 National Electrical Code.

The Combination Type AFCI is required in the 2005, 2008, and 2011 National Electrical Code.

#### Plug-On Combination Type Arc Fault Circuit Breakers, Type BR—10 kAIC, 120 Vac and 120/240 Vac

A combination type arc fault circuit interrupter is a device that includes all of the protection offered by the branch feeder AFCI (mitigation of high current arcing faults in the complete circuit, including connected cords). In addition it provides direct detection of persistent low current arcing faults down to 5 amps with associated mitigation of fire hazards in the cords connected to the outlets. High current arcing faults can occur from line to neutral or line to ground. These arcing faults are in parallel with the load and produce the most energy of all arcing faults. The current level of low current arcing faults is limited by the load.

#### Plug-On Ground Fault Circuit Breakers, Type GFTCB and GFEP—10/22 kAIC, 120 Vac and 120/240 Vac

Ground Fault Application Notes Single-pole GFTCBs are designed for use in twowire, 120 Vac circuits. See Page V1-T1-87 for a typical wiring configuration.

Two-pole GFTCBs are designed for use in threewire, 120/240 Vac circuits, 120 Vac multiwire circuits employing common, neutral and two-wire, 240 Vac circuits obtained from a 120/240 Vac source.

Page V1-T1-87 shows typical wiring configurations for a 120/240 Vac multiwire circuits, and a 240 Vac, twowire circuit. Note the "panel neutral" conductor connects to the neutral bar, even though the neutral is not included in the load circuit. This connection is necessary to supply a 120 Vac power source to the ground fault sensing circuit. The figures are shown with a 120/240 Vac, single-phase, three-wire power source, but are also applicable to a 120/208 Vac, three-phase, four-wire power supply. For all figures, the electrical operation of the GFTCB is not affected by the equipment ground.

#### Non-CTL Plug-On Replacement —Circuit Breakers, Type BRD— 10 kAIC, 120/240 Vac

## Non-CTL 10 kAIC for Replacement Purposes Only

For replacement in enclosures manufactured prior to 1968 with unnotched stabs. Circuit breakers do not have rejection tab.

## Plug-On, Dual Purpose Arc Fault/ Ground Fault Circuit Breakers, Type BR—10 kAIC, 120 Vac

Poles	Ampere Poles Rating	Configuration	Catalog Number
Single-pole		Combination AFCI GFCI	BRLAFGF115
10 kAIC	10 KAIC 20	Combination AFCI GFCI	BRLAFGF120

### Plug-On Combination Type Arc Fault Circuit Breakers, Type BR—10 kAIC, 120 Vac and 120/240 Vac

BRCAF115

1. F	Circuit Breakers

## Notes

① Breaker qualifies as combination arc fault, per UL 1699.

<sup>(2)</sup> Breaker qualifies as personnel protection ground fault, (5 mA) per UL 943.

<sup>③</sup> Clamshell packaging available with CS modification code on the end of catalog number.

④ Available with bell alarm or auxiliary switch. See circuit breaker accessories on Page V1-T1-85.

<sup>(6)</sup> For use with copper wire only.
