Odor Control

NI-712 Orange Odor Eliminator

Eliminates the toughest airborne odors!

Super-concentrated NI-712 is specifically formulated to eliminate the toughest odors caused by mercaptans; sulphur; medical conditions; medical waste; petroleum; chemical processing; waste treatment; water treatment; food waste; smoke odor from fire damage; and more.

Neutron's NI-712 Orange Odor Eliminator contains SE-500™, a patented odor-eliminating ingredient that boosts the natural properties of NI-712 and makes it even more powerful. Unlike many products on the market that merely mask foul odors, SE-500 combines with odor molecules to truly neutralize them. The concentrated, long-lasting formula of NI-712 Orange is the most economical investment in odor control you can make.

Units: Case of 4 Gallons; 20-Gallon Drum; 55-Gallon Drum

NI-712 Customers Include:

Medical Waste Management
Petroleum Refineries
Gas Companies

Composting Companies
Waste Management
Industrial Clean Up Services

Recycling Facilities
Water Treatment Plants
Manufacturing

Common Applications for Airborne Odors:

Trash Compactors

Trash compactors accumulate waste discarded from restaurants, hospitals, nursing homes, etc. Once the unit is filled to capacity, the garbage is compacted together to make room for even more garbage. One compacted cube can hold 50-400 lbs. of waste. This mixing and mashing of rubbish only intensifies malodors.

Dumpsters

Dumpsters can hold garbage for up to seven days at a time. The large mass of waste can produce some pretty strong odors, especially when sitting in direct sunlight. And, with the malodors come bugs. Flies, gnats and bees are drawn to the smelly garbage at dumpster sites.

Trash Chutes

Trash chutes in apartment complexes, hotels and hospitals can become breeding grounds for some of the foulest malodors around. Waste odors are confined in such a small space, accumulating for days at a time.
