Vivid color-coded Underground Tapes quickly warn excavation crews of the existence of buried pipes and cables before damage can occur. Our non-adhesive polyethylene Underground Tape is a simple, economical way to protect buried utility lines. Tapes are impervious to alkalis, acids and other soil components. Available in 3" x 1000' and 6" x 1000' lengths from stock or other widths available by special order. These tapes are printed with many stock legends or can be printed with your own custom wording. Meets APWA recommended color codes.

Underground tape should be installed 12"-18" below ground level and 12" directly above buried pipes, cables and conduits, before final backfilling. Installation of underground tape should be supervised by a professional or authority concerned with the proper use of the product.
